

# **Variability of observed reconnection events at the magnetopause as a function of solar wind parameters**

Dr. Walter D. Gonzalez /Brazilian National Institute for Space Research,  
Sao Jose dos Campos, SP, Brazil

Abstract: Some observed reconnection events at the Earth's magnetopause will be discussed in terms of related solar wind and magnetosheath parameters, especially dealing with associated reconnection rate values. Some other reconnection features of interest refer to the formation of the reconnection line and to its position with respect to the observed reconnection events.
